

#TelekomChallenge: Chocolate Cloud and O&O among the Top 10

Berlin and Skødstrup, June 02, 2021

The Telekom Challenge jury has nominated the Top 10 finalists. In recognition of their ideas for new products, Berlin-based O&O Software GmbH together with its Danish partner Chocolate Cloud ApS are among the best ten participants in the category Development, beating out competition from 35 countries and 5 continents.

The Telekom Challenge is an international scientific competition awarding prizes of over 700.000 Euros, sponsored by the Deutsche Telekom AG under the supervision of T-Labs. Awarded will be innovative concepts for the home networks of tomorrow.

National and international universities and research centers along with businesses and start-ups have been invited to present their ideas for developing future, long term improvement of secure data distribution in home networks.

Cheered by the news, Olaf Kehrer, Co-Founder and Managing Director of O&O Software GmbH has this to say: "The fact that our concept was chosen to be among the best ten is a great honor for us. Together with our partner, Chocolate Cloud, we want to develop a new approach for protecting the home user's data which practically brings the cloud into the home."

"We are extremely happy to be part of the Top 10 selected in the Deutsche Telekom Challenge. In our partnership with O&O Software, we are making data protection easy for our users while giving them full control over where their data is saved and with whom they wish to share it. The key is not in trusting the cloud, but in using it anyway" says Daniel Lucani, Co-Founder and CEO of Chocolate Cloud ApS, from Denmark.

About Chocolate Cloud ApS

Chocolate Cloud ApS is a leading supplier of Privacy-First Distributed Cloud Storage located in Denmark. Its SkyFlok product line (skyflok.com) enables users to select cloud locations and suppliers worldwide for saving and sharing their data securely. To describe it briefly, each file is encrypted, shuffled, and distributed across various clouds selected by the user, whereby protection of privacy and data security are maintained. Doing it this way reduces dependency on any single provider, and the underlying technology allows access to data even if one of the providers is unavailable.
